ORIENT LUMBER AND TRIM FOR BEST APPEARANCE

Framing lumber is graded for structural strength and not appearance. Exterior trim is graded for one good side.

Always install the material leaving the best edge and best surface visible. Please remember that these blemishes in no way negatively affect the strength or integrity of our product. (See Fig. A, B, C.)

CONCRETE FOUNDATION

If you choose to install your kit on a concrete slab refer to the diagram below.

Slab must be flush at the front of the shed for door opening clearance. Any over-sized slab must have the excess at the sides or back of shed.

Building Size	Actual Floor Size	A	B	C
8'x 8' (243,8 x 243,8 cm)	8'x 7'-8-5/8" (243,8 x 235,3 cm)	96" (243,8 cm)	92-5/8" (235,3 cm)	85-5/8" (217,5 cm)

Requires:

x4 2 x 4 x 8' (5,1 x 10,2 x 243,8 cm)

MUST be treated lumber.

x1 Caulk

Allow new concrete slabs to cure for at least seven (7) days.

- A treated 2 x 4" (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete. **Hint: Use treated lumber in your kit or purchase full length treated lumber.**
- Use a high quality exterior grade caulk beneath all sill plates.
- Fasten 2 x 4" (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (**fasteners not included**).
- Check local code for concrete foundation requirements.

FLOOR LEVELING OPTIONS

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.
Leveling materials are not included in this kit.

PREFERRED METHOD - 4x4 TREATED RUNNERS

MATERIAL REQUIRED

- ☐ **x2** 4 x 4 x 8' (10,2 x 10,2 x 243,8 cm) Treated Lumber
- ☐ **Fasteners for Frame to 4 x 4.**
 (3" Screws shown as one option.) Minimum (20) 3" screws / exterior grade.
- Use only wood treated for ground contact and fasteners approved for use with treated wood.**
- Always support frame seams.**

LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- ☐ Gravel
- ☐ Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- ☐ 2x4 Treated Lumber
- ☐ Asphalt Shingles

Leveling higher than 16" not recommended.

LEVEL AND SQUARE FLOOR FRAME

STOP!

Before attaching floor decking, it is important to level and square the floor frame.
A level and square floor frame is required to correctly construct your shed.

BEGIN

- 1** ⚠ See page 7 for the preferred floor leveling method.
- 2** Use level and check the frame is level before applying floor panels.
- 3** Check for frame squareness by measuring diagonally across corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately 133-5/16" (338,6 cm).
- 4** When the frame is level and square secure one side of frame to the 4x4 runners using one fastener at ends of each runner. At the opposite end of the frame, secure the frame to 4x4 runners with one fastener at ends of each runner making sure the frame remains square (**Fig. A**).

FINISH

Once the floor frame is level and square fasten the frame at each point where the frame contacts the 4x4 runners.

FLOOR PANELS

- 3** Ensure that the floor frame is square by measuring diagonally across the frame corners. If the measurements are the same, your floor frame is square. The measurement will be approximately 133-5/16" (338,6 cm).
- 4** Secure the panel with 2" nails spaced 6" apart on edges and 12" apart inside panel. Use a chalk line or use pre-painted grid lines to locate joists.

For squareness maintain 3/4" measurement along panel edge. **!**
