NOTES

FLOOR LEVELING OPTIONS

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.
Leveling materials are not included in this kit.

PREFERRED METHOD - 4x4 TREATED RUNNERS

MATERIAL REQUIRED

☐ **x2** 4 x 4 x 12' (10 x 10 x 366 cm) Treated Lumber

☐ **Fasteners for Frame to 4 x 4.**
(3" Screws shown as one option.) Minimum (28) 3" screws / exterior grade.

 **Use only wood treated for ground contact and fasteners approved for use with treated wood.**

 **Always support frame seams.**

LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- ☐ Gravel
- ☐ Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- ☐ 2x4 Treated Lumber
- ☐ Asphalt Shingles

 **Leveling higher than 16" not recommended.**

CONCRETE

- If you are building your shed on a concrete foundation see the following page.

CONCRETE FOUNDATION

Your kit contains all materials to construct a wooden floor. If you choose to install your kit on a concrete slab refer to the diagram below.

Building Size	Actual Size	A	B	C
8'x 12' (244 x 366 cm)	96" x 144" (244 x 366 cm)	96" (244 cm)	137" (345 cm)	144" (366 cm)

Requires:

- ☐ **x2** 2 x 4 x 12' (5 x 10 x 366 cm)  **MUST be treated lumber.**
- ☐ **x2** 2 x 4 x 8' (5 x 10 x 244 cm)  **MUST be treated lumber.**
- ☐ **x1** Caulk 

 Allow new concrete slabs to cure for at least seven (7) days.

- A treated 2 x 4 (5 x 10 cm) sill plate is required when installing your shed on concrete. **Hint: Use treated lumber in your kit or purchase full length treated lumber.**
- Use a high quality exterior grade caulk beneath all sill plates.
- Fasten 2 x 4 (5 x 10 cm) sill plates to slab using approved concrete anchors (**fasteners not included**).
- Check local code for concrete foundation requirements.

LEVEL AND SQUARE FLOOR FRAME

STOP!

Before attaching floor decking, it is important to level and square the floor frame.
A level and square floor frame is required to correctly construct your shed.

✓ **BEGIN**

1 ⚠ See page 8 for the preferred floor leveling method.

2 Use level and check the frame is level before applying floor panels.

3 Check for frame squareness by measuring diagonally across corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately 173-1/16" (440 cm).

4 When the frame is level and square secure one side of frame to the 4x4 runners using one fastener at ends of each runner. Move to the opposite end of the frame. Secure the frame to 4x4 runners with one fastener at ends of each runner making sure the frame remains square (**Fig. A**).

🏁 **FINISH**

5 Once the floor frame is level and square fasten the frame to the 4x4 runners at each point the frame contacts the 4x4 runners.

First, secure
at ends with
one fastener.

Fig. A

Second, secure
at ends with
one fastener.

FLOOR PANELS

PARTS REQUIRED:

FLOOR PANELS NOT INCLUDED. SEE PAGE 7 FOR PANEL SIZES AND QUANTITIES.

Ensure your floor frame is square by installing one panel and squaring frame.

- 1** Attach the 48 x 96" panel with the rough side up (painted-grid lines side) with the 48" edge and corner flush to the floor frame (**Fig A**). Secure panel with two 2" nails in the corners.
- 2** Move to the opposite side. Using the long edge of the panel as a lever, move the panel side-to-side until the top corner is flush to the floor frame (**Fig. B**). Secure panel with two 2" nails in the corners.
- 3** Check the floor frame is square by measuring diagonally across the frame corners. If the measurements are the same your floor frame is square. The measurement will be approximately 173-1/16" (440 cm) (**Fig. C**).
- 4** Continue attaching the panel using 2" nails 6" apart on edges and 12" apart inside panel. Use a chalk line or use pre-painted grid lines to nail into joists under panel.

FLOOR PANELS

PARTS REQUIRED:

x2  5/8 x 48 x 96"

5 Continue installing panels with rough side up (painted grid lines).

6 Use grid lines on panel for 2" nails 6" apart on edges, and 12" apart inside panels.

7 You have finished attaching your floor panels.

IMPORTANT!

STOP!

Check the floor frame is level after installing floor panels.
Re-level if needed.

HINT:

- The floor should be used as a stable work surface for wall construction.
- Organize your assembly procedure during the build process to avoid over-handling of the walls.
